SHI-Produktbewertung 2024

Seit 2008 etabliert die Sentinel Holding Institut GmbH (SHI) einen einzigartigen Standard für schadstoffgeprüfte Produkte. Experten führen unabhängige Produktprüfungen nach klaren und transparenten Kriterien durch. Zusätzlich überprüft das unabhängige Prüfunternehmen SGS-TÜV Saar regelmäßig die Prozesse und Aktualität.

Kriterium	Produktkategorie	Schadstoffgrenzwert	Bewertung
SHI-Produktbewertung	Bodenbeläge aus Holz /-werkstoff	TVOC ≤ 300 µg/m^3 Formaldehyd ≤ 36 µg/m^3	Schadstoffgeprüft
Gültig bis: 23.04.2028

QNG - Qualitätssiegel Nachhaltiges Gebäude

Das Qualitätssiegel Nachhaltiges Gebäude, entwickelt durch das Bundesministerium für Wohnen, Stadtentwicklung und Bauwesen (BMWSB), legt Anforderungen an die ökologische, soziokulturelle und ökonomische Qualität von Gebäuden fest. Das Sentinel Holding Institut prüft Bauprodukte gemäß den QNG-Anforderungen für eine Zertifizierung und vergibt das QNG-ready Siegel. Das Einhalten des QNG-Standards ist Voraussetzung für den KfW-Förderkredit. Für bestimmte Produktgruppen hat das QNG derzeit keine spezifischen Anforderungen definiert. Diese Produkte sind als nicht bewertungsrelevant eingestuft, können jedoch in QNG-Projekten genutzt werden.

Kriterium	Pos. / Bauproduktgruppe	Betrachtete Stoffe	QNG Freigabe
3.1.3 Schadstoffvermeidung in Baumaterialien	2.3 Mehrschichtiges Holzparkett, Bambusbeläge und Bodenbeläge auf Holzwerkstoff-Trägerplatten	VOC / Emissionen / gefährliche Stoffe	QNG-ready
Nachweis: Prüfbericht des Instituts Eurofins Product Testing A/S vom 27.04.2023. Konformitätserklärung vom 23.02.2026 bestätigt die materielle Übereinstimmung mit dem geprüften Produkt.			

Kriterium	Bewertung
ANF2-WG1 Nachhaltige Materialgewinnung	Kann Gesamtbewertung positiv beeinflussen
Nachweis: FSC SGSCH-COC-001258 vom 27.December 2022

LEED v4.1

LEED (Leadership in Energy and Environmental Design) ist ein international anerkanntes Gebäudezertifizierungssystem des U.S. Green Building Council. Es zählt zu den weltweit am weitesten verbreiteten Nachhaltigkeitsstandards für Gebäude und wird insbesondere bei international ausgerichteten Projekten eingesetzt. LEED bewertet Gebäude ganzheitlich in Kategorien wie Energieeffizienz, Ressourcenschonung, Materialauswahl, Innenraumqualität und Standortqualität. Je nach erreichter Punktzahl werden die Zertifizierungsstufen LEED Certified, Silver, Gold oder Platinum vergeben.

Produktsiegel

In der Baubranche spielt die Auswahl qualitativ hochwertiger Materialien eine zentrale Rolle für die Gesundheit in Gebäuden und deren Nachhaltigkeit. Produktlabels und Zertifikate bieten Orientierung, um diesen Anforderungen gerecht zu werden. Allerdings besitzt jedes Zertifikat und Label eigene Prüfkriterien, die genau betrachtet werden sollten, um sicherzustellen, dass sie den spezifischen Bedürfnissen eines Bauvorhabens entsprechen.

Dieses Produkt ist schadstoffgeprüft und wird vom Sentinel Holding Institut empfohlen. Gesundes Bauen, Modernisieren und Betreiben von Immobilien erfolgt dank des Sentinel Holding Konzepts nach transparenten und nachvollziehbaren Kriterien.

Produkte mit dem QNG-ready Siegel des Sentinel Holding Instituts eignen sich für Projekte, für welche das Qualitätssiegel Nachhaltiges Gebäude (QNG) angestrebt wird. QNG-ready Produkte erfüllen die Anforderungen des QNG Anhangdokument 3.1.3 "Schadstoffvermeidung in Baumaterialien". Das KfW-Kreditprogramm Klimafreundlicher Neubau mit QNG kann eine höhere Fördersumme ermöglichen.

Das Zeichen des Forest Stewardship Council zeichnet Holz und holzhaltige (Misch-)Produkte aus, die aus nachhaltiger überwachter Forstwirtschaft stammen. Gesundheitliche Kriterien spielen keine Rolle.

Das Instytut Techniki Budowlanej (ITB) ist das führende polnische Institut für Bautechnik und agiert unter der Autorität des Ministeriums für Entwicklung und Technologie der Republik Polen. Als notifizierte und akkreditierte Prüfstelle bewertet und verifiziert das ITB Umweltproduktdeklarationen (EPD) gemäß ISO 14025 und EN 15804. Damit trägt das Institut wesentlich zur Transparenz und Vergleichbarkeit ökologischer Produktinformationen bei und unterstützt Hersteller sowie Planer bei der nachhaltigen Bewertung von Bauprodukten im europäischen Kontext.

SUPPLIER'S STATEMENT

We confirm that we do not intentionally add or anticipate the presence of substances subject to the restrictions listed below in the Barlinek products as outlined in the Attachment.

This information is based on current data from our suppliers regarding the product ingredients used in the production of Barlinek floorboards and our understanding of our manufacturing processes. Also, we do not introduce the following restricted substances in our production process, covering both the product itself and its packaging.

However, we would like to clarify that Barlinek does not routinely conduct analyses to detect these substances, so we are unable to formally confirm or guarantee their absence (this applies to both the product itself and its packaging):

If you have any further inquiries, please don't hesitate to contact us at:
dariusz.wojdat@barlinek.com.pl

This declaration applies to the following restricted substances:

REACH

All the products listed above comply with the criteria outlined in Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 on the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), as amended. They do not contain any chemicals identified as substances of very high concern (SVHC) listed in the REACH candidate list of restrictions, Annex XVII, and Annex XIV, and specifically they do not contain any authorised chemicals listed in Annex XIV of REACH at a concentration exceeding 0.1% by weight.

a) they do not contain any authorised chemicals listed in Annex XIV of REACH at a concentration exceeding 0.1% by weight.
b) they do not contain any chemicals listed in Annex XVII of REACH at a concentration exceeding 0.1% by weight.

and / or

c) the products listed below contain substances listed in Annex XVII of REACH at a concentration exceeding 0.1% by weight. However, restrictions related to such substances do not apply to the products within the scope and their uses.
Product code / Substance Cas No. / Concentration (by weight %):

.....N/A.....

d) they do not contain any substances at a concentration exceeding 0.1% by weight listed on the REACH list of substances of very high concern (SVHC)

e) they do not contain any substances at a concentration exceeding 0.1% by weight listed on the REACH candidate list of substances of very high concern (SVHC)

ITB is the verified member of The European Platform for EPD program operators and LCA practitioner www.eco-platform.org

Basic information

This declaration is the Type III Environmental Product Declaration (EPD) based on EN 15804 + A2 and verified according to ISO 14025 by an external auditor. It contains the information on the impacts of the declared construction materials on the environment and their aspects verified by the independent body according to ISO 14025. Basically, comparison or evaluation of EPD data is possible only if all the compared data were created according to EN 15804 + A2.

Life cycle analysis (LCA):	A1-A5, B1-B7, C1-C4 and D modules in accordance with EN 15804 + A2 (Cradle to Grave with module D)
Year of EPD preparation:	2024
Product standard:	EN 13489: 2023
Reference Service Life (RSL):	> 30 years
PCR:	ITB-PCR A, v. 1.6
Declared unit:	1 m^2
Reasons for performing LCA:	B2B
Representativeness:	Ukraine, European

MANUFACTURER

Barlinek Invest LLC is a Ukrainian manufacturer of layered wooden floors. As well as the Barlinek parquet boards, the group also produces certified flooring for sporting facilities, skirting boards and wood biofuels – wood pellet. Barlinek has also initiated many programmes concerning environmental protection and ecological education. For many years now the company has been conducting its 1 for 1 programme, whereby the planting of one tree is co-financed for each purchased pack of Barlinek parquet boards marked with a logo of this pro-ecological initiative.

Barlinek parquet boarding:

- ✓ possible to lay over underfloor heating
- ✓ solid construction
- ✓ floor resistant to changes in temperature and humidity
- ✓ fast and easy DIY installation
- ✓ product ready to use immediately after installation
- ✓ possible to renovate

Fig. 1. Cross structure of 3-layer wooden floorboard produced by Barlinek Invest LLC

Barlinek parquet board is made from three layers of real wood arranged in a cross structure (Fig. 1) in order to prevent swelling, squeaking or drying out causing splits. The cross construction reduces natural tension and compression of wood, provides a balance between the layers of the board, and thus guarantees the stability of the floor, even under changing weather conditions outside. The Barlinek parquet board's layered structure ensures the floor's stability and is suited for underfloor heating. The parquet boards are joined using 5Gc joints and Barclik (Fig. 2) which allow to lay the floor without most of the tools which are usually necessary to install a floor. Specification of the product is shown in Table 1.

Fig. 2. Views of Barlinek floorboards with 5Gc BARLOCK and BARCLIK systems

Joints – 5Gc BARLOCK & BARCLIK systems provide:

- fast & easy installation
- reductions of contamination
- possibility to lay again
- reduction of damage risk during installation or dismantling

PRODUCTS DESCRIPTION AND APPLICATION

Table 1. Specification of 3-layer wooden parquet board produced by Barlinek Invest LLC

3-LAYER WOODEN PARQUET BOARD	
Series:	Advance, Décor, Easy Basic, Easy Classic, Life, Pure, Pure Vintage Line, Pure Classico Line, Senses, Sport Extreme, Sport Training, Tastes of Life and others
Wood species:	oak, beech, birch, ash, maple
Finishing:	Lacquer: standard, matt, high-gloss, structural, economy, investment, professional, ultra matt Oil: UV oil, OXY oil Natural or coloured, unfinished
Colour:	Natural, white, brown, light brown, dark brown, smoked effect, cognac, cream, cream white-wash, espresso, gold, graphite, coffee, creamy-beige, honey, olive, grey, walnut, gold-brown, row effect, extreme white, grey beige, oak effect
Length [mm]	660, 725, 1092, 1800, 2200
Width [mm]	110, 130, 155, 180, 207
Thickness [mm]	10, 14, 18

The Barlinek parquet board can be installed in a floating system, that is glueless and based on modern tongue-and-groove joints. It is a method, that allows to install the floor yourself. The floor is also easy to be dismantled or re-installed. An alternative is to install the floor in a traditional way - by gluing the boards to the subfloor, which ensures stability of the installation even on large surfaces. The Barlinek parquet board does not require any additional preservative treatment. The floor is ready for use immediately after installation. The performance of the product is listed in Table 2.

Fig. 3. The view of 3-layer wooden floorboard produced by Barlinek Invest LLC during installation

Table 2. Performance of 3-layer wooden parquet board produced by Barlinek Invest LLC

Characteristics	**Declared performance**	**Harmonized standard**
Reaction to fire	Dfl – s1	EN 14342: 2013
Minimal density	500 kg/m^3	
Minimal thickness	10 mm	
Release of formaldehyde	E-1	
Content of pentachlorophenol	≤ 5 ppm	
Thermal conductivity	0,14 W/mK	

More information can be found on the Barlinek Invest LLC website: www.barlinek.com.ua

LIFE CYCLE ASSESSMENT (LCA) – general rules applied

Declared Unit

The declaration refers to declared unit (DU) – 1 m^2 of 3-layer wooden parquet board with thickness of 10 mm, 14 mm and 18 mm

Allocation

The allocation rules used for this EPD are based on general ITB-PCR A, v 1.6. 3-layer wooden parquet board production is a line process with multiple co-products in one factory located in Barlinek (Ukraine). Allocation is done on product mass basis.
All impacts from raw materials extraction and processing are allocated in A1 module of EPD. 99 % of impacts from line production were inventoried and allocated to all 3-layer wooden parquet board production. Municipal waste and waste water of whole factory were allocated to module A3. Energy supply was inventoried for whole production process. Emissions in Barlinek Invest are measured and were allocated to module A3. Packaging materials were not taken into consideration They are recycled in a closed loop.

System limits

The life cycle analysis (LCA) of the declared products covers product stage – modules A1-A5, use stages – modules B1-B7, end of life – modules C1-C4 and benefits and loads beyond the system boundary – module D (Cradle to Grave with module D) in accordance with EN 15804 + A2 and ITB PCR A, v. 1.6. The details of systems limits are provided in product technical report. All materials and energy consumption inventoried in factory were included in calculation. Office impacts were also taken into consideration. In the assessment, all significant parameters from gathered production data are considered, i.e. all material used per formulation, utilised thermal energy, internal fuel and electric power consumption, direct production waste, and all available emission measurements. It can be assumed that the total sum of omitted processes does not exceed 5 % of all impact categories. In accordance with EN 15804 + A2, machines and facilities (capital goods) required for the production as well as transportation of employees were not included in LCA.

Modules A1 and A2: *Raw materials supply and transport*

Raw materials such as softwood and hardwood logs come from local suppliers while some additives and ancillary items come from foreign countries. Data on transport of the different products to the manufacturing plants is collected and modelled for factory by assessor. Means of transport include small trucks < 10 t (f. ex. couriers), average truck (10-16 t) and big truck (> 16 t) are applied. European standards for average combustion were used for calculations.

Module A3: *Production*

The Fig. 4 shows the working process during the production of the 3-layer wooden parquet boards. The floor manufacturing is basically a three step process including drying, milling and finishing. Lumber logs are delivered to factory located in Vinnytsia, where they are fed into a stacking machine prior to drying. Dried lumber then undergoes planning, ripping, trimming and moulding during milling to produce unfinished flooring boards which are future used for the production of 3-layer parquet

boards. Then the flooring product is sorted by grade and type, packaged and then stored prior to the shipment of the final product. The facility is PN-EN ISO 9001 certified.

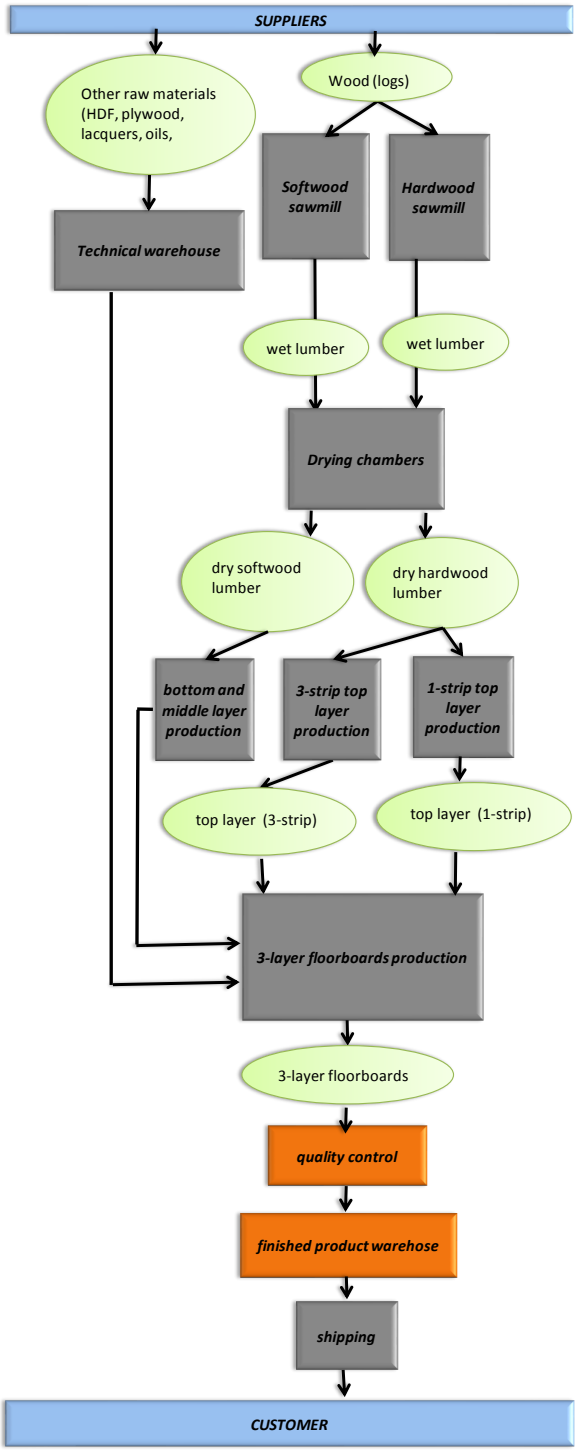

Fig. 4. A scheme of the 3-layer wooden parquet board production by Barlinek Invest factory (Ukraine)

Modules A4-A5: *Construction stage*

Transport of the 3-layer wooden parquet board from factory gate to the place of installation was considered. Parquet boards are delivered to Ukraine as well as foreign recipients. Means of transport

include truck (Euro 6), loaded in 90%, was assumed to cover an average distance of 500 km (module A4).

3-layer wooden parquet boards are delivered to an installation site in the form of elements ready for assembly. The installation process must be performed according to the instruction provided by manufacturer. Considered environmental burdens are associated with the use of ancillary materials (transport of glues, protective tapes or floor underlays) and energy consumption associated the use of power assembly tools (module A5).

Any scenarios included for A4 and A5 shall be based on the specific conditions for the RSL.

Modules B1-B7 : *Use stages*

In the use stage all impacts related to the use of the 3-layer wooden parquet board over it entire life cycle are presented. This includes provisions for the transport of all materials as well as the energy and water impact associated with use it. There are no consumables, repair or replacements related to the use of 3-layer wooden parquet board for the period of the reference service life (RLS), hence module B1 and modules B3-B5 have zero impacts.

A scenario was assumed that the floor is oiled/varnished once every three years assuming RLS of 30 years (i.e. ten cycles) and double oil/varnish application. These activities are presented in module B2. Moreover, 3-layer wooden parquet board do not use energy or water during their service life and there are no emissions released from the product during the use.

There are no energy use to operate building integrated technical systems like energy use for electrical components e.g. electrical motors. Therefore, module B6 has zero impacts. Replacement of the product due to aesthetic reasons (change of interior design) and not related to the loss of performance is not taken into account. Module B7 covers water consumption in the use phase, i.e. the use of domestic hot water and detergent for washing parquet boards according to floor care instructions recommended by the manufacturer. The scenario assumes washing the floor once a week and using a floor care agent with a capacity of 500 m^2/l. Any scenarios included for B1-B7 shall be based on the specific conditions for the RSL.

Modules C1-C4 and D: *End-of-life (EoL)*

In the adapted scenario, deconstruction of the 3-layer wooden parquet boards is performed with the use of electrical tools (module C1). The resulting waste is transported to a waste processing plant distant about 100 km, on 16-32 t lorry EURO 6 (module C2). It is assumed that at the EoL cycle 90% of the 3-layer wooden parquet boards are recovered in municipal incineration (module C3) while the residues undergo landfilling (10%) of the wooden parquet boards are stored in landfills (module C4). Module D presents credits resulting from the benefits from avoided thermal energy production (gas).

Data quality

The data selected for LCA originate from ITB-LCI questionnaires completed by Barlinek Invest LLC using the inventory data, ITB and Ecoinvent v. 3.10 databases. No specific data collected is older than five years and no generic datasets used are older than ten years. The representativeness, completeness, reliability, and consistency are judged as good. Ukrainian electricity was calculated based on Ecoinvent v. 3.10 data.

Data collection period

Primary data provided by Barlinek Invest LLC covers a period of 01.01.2022 – 31.12.2022 (1 year). The life cycle assessments were prepared for Ukraine and Europe as reference area.

Assumptions and estimates

The impacts of the representative 3-layer wooden parquet board were aggregated using weighted average. Impacts were inventoried and calculated for all products in 3-layer wooden parquet board product group.

Calculation rules

LCA was performed using ITB-LCA tool developed in accordance with EN 15804 + A2.

Databases

The data for the processes comes from Ecoinvent v. 3.10 and ITB-Database. Specific data quality analysis was a part of external audit.

LIFE CYCLE ASSESSMENT (LCA) – Results

Declared unit

The declaration refers to declared unit (DU) – 1 m^2 of 3-layer wooden parquet board with thickness of 10 mm, 14 mm and 18 mm manufactured by Barlinek Invest LLC

Table 3. System boundaries for the environmental characteristic for 3-layer wooden parquet board manufactured by Barlinek Invest LLC

Verification

The process of verification of this EPD is in accordance with ISO 14025 and ISO 21930.
After verification, this EPD is valid for a 5-year-period. EPD does not have to be recalculated after 5 years, if the underlying data have not changed significantly.

The basis for LCA analysis was EN 15804 + A2 and ITB PCR A
Independent verification corresponding to ISO 14025 (subclause 8.1.3) ☒ external ☐ internal
External verification of EPD: Halina Prejzner, PhD Eng LCA, LCI audit and input data verification: Mateusz Kozicki, PhD Verification of LCA: Michał Piasecki, PhD, D.Sc. Eng

Note 1: The declaration owner has the sole ownership, liability and responsibility for the information provided and contained in EPD. Declarations within the same product category but from different programs may not be comparable. Declarations of construction products may not be comparable if they do not comply with EN 15804 + A2. For further information about comparability, see EN 15804 + A2 and ISO 14025. Depending on the application, a corresponding conversion factor such as the specific weight per surface area must be taken into consideration.

Note 2: ITB is a public Research Organization and Notified Body (EC Reg. no 1488) to the European Commission and to other Member States of the European Union designated for the tasks concerning the assessment of building products' performance. ITB acts as the independent, third-party verification organization (17065/17025 certified). ITB-EPD program is recognized and registered member of The European Platform – Association of EPD program operators and ITB-EPD declarations are registered and stored in the international ECO-PORTAL.

CERTIFICATE № 632/2024
of TYPE III ENVIRONMENTAL DECLARATION

Products:

Three-layer wooden parquet board

Manufacturer:

Barlinek Invest LLC

Hetman Mazepa (Chekhova) 7 V, Vinnysia, Ukraine

confirms the correctness of the data included in the development of
Type III Environmental Declaration and accordance with the requirements of the standard

EN 15804+A2

Sustainability of construction works.
Environmental product declarations.
Core rules for the product category of construction products.

This certificate, issued on 30th April 2024 is valid for 5 years
or until amendment of mentioned Environmental Declaration

Head of the Thermal Physic, Acoustics and Environment Department
Agnieszka Winkler-Skalna, PhD
